

RODENTICIDE RANGE

Surefire offers a comprehensive range of rodenticides designed to manage rodent populations across various environments effectively. The **All Weather Rodent Blocks**, containing 0.05g/kg Brodifacoum, are wax-based baits suitable for both dry and damp conditions in industrial, commercial, agricultural, and domestic settings.

The **Broma** range includes **Broma Blocks** and **Broma Grain Bait**, both utilizing 0.05g/kg Bromadiolone to control rats and mice, including those resistant to other anticoagulants. Additionally, **Broma Liquid Rodenticide**, with 0.5g/L Bromadiolone, is a concentrated liquid bait, particularly effective in hot, dry conditions where rodents seek water sources.

The **Couma Blocks**, containing 0.37g/kg Coumatetralyl, are ready-to-use bait blocks effective against rats and mice, suitable for use in various environments.

Similarly, **Difenate Blocks**, with 0.05g/kg Difenacoum, are designed for controlling brown or Norway rats and mice, including those resistant to other anticoagulants, and are effective in both damp and dry situations.

To support these rodenticides, Surefire provides different types of bait stations to cover all your rodent needs. These tamper-resistant stations are designed to protect non-target species, such as children and pets, while ensuring effective bait delivery.
